# Action items

- adapt cuts and observable definitions/binnings to current experimental needs
- include few additional observables which provide insights into what's going on
- include more of the modern tools on the market:
  - UMEPS, UNLOPS (PYTHIA8, S. Prestel)
  - ...
- evaluate uncertainties ( $\mu_R$ ,  $\mu_F$ ,  $\mu_Q$ ,  $Q_{\text{cut}}$ , etc where possible/applicable)
- comprehensive write-up
