

③ Expt Survey of 1050 techniques in SM measurements

EXSE

Smooth vs Expt cones

① Add'l processes: $W \times (\text{Maro}, \dots)$ $Z \times (\text{prec?})$

"Fixup" (FForder + ME) $\gamma \times \gamma$ $\gamma \times \gamma$ (Leandro, Gubun)

$\gamma \times \gamma \rightarrow \sim 0,05$ (Ciran) (+f)

② $\gamma \times \gamma$ "bad" behavior over wide range \Rightarrow Need MC frag

"Transverse" and "collinear" Fragmentation $\{$ in other processes $\}$

How important \rightarrow PtoX $(\gamma \times \gamma \text{ ty already OK})$

$V \times (Z \times) P \lesssim MC \text{ F} \times \text{ POWREZ / MinLO}$ \oplus Scale uncertainty? minima
