

MC Tools report Les Houches 2017 - BSM Session

Outline of the activities

Topics:

- SUSY Les Houches Accord update
- Recasting/Reinterpretation
- Simplified Models

Topics in collaboration with Higgs and BSM

- Simplified Models for Long Lived Particles
- Using Higgs fiducial cross sections

SUSY Les Houches Accord update

- Work started in LH 2013. Already quite complete. Needs to be polished and written up. Need to get agreement for the SUSY code developers.
 - The plan is to add new blocks to a supersymmetric spectrum with information on a section of particles included in the spectrum of interest. We propose to add one new process under consideration.

Why a Les Houches Accord on Analysis Description?

◆ Picking up an experimental publication

- ❖ Reading
- ❖ Understanding

✓ Relatively easy

◆ Writing the analysis code in the tool internal language

✓ Relatively easy

◆ Getting the information missing from the publication for a proper validation

- ❖ **Efficiencies** (trigger, electrons, muons, b-tagging, JES, etc.)
 - ★ Including p_T and/or η dependence
 - ★ Accurate information
- ❖ Detailed **cutflows** for some well-defined **benchmark** scenarios
 - ★ Exact definition of the benchmarks (SLHA spectra)
 - ★ Event generation information (cards, tunes, LHE files if possible)
- ❖ Expected **number of events** in each region and **cross sections**
- ❖ **Digitized histograms** (e.g., on HEPDATA)

⚠ Essential
✗ Often difficult!

◆ Comparing tools and real life

◆ Development of a way to provide the information on the analysis in a readily form

- ❖ The analysis is described following a text format
 - ★ Two similar options so far (to be merged in one for the proceedings)
 - ★ Blocks for object definitions, functions and methods, selections, region definitions
 - ★ Regions are defined from a combination of cut blocks
- ❖ Validation: detailed cutflows for specific benchmarks must be provided in the description
- ❖ **Must be endorsed by the experimental collaborations**
 - ★ Small amount of work to make the analysis useable by the TH community
- ❖ **Finalization of the recommendations to be achieved for the proceedings**

◆ Presentation of results for specific new physics scenario

- ❖ Structure for the cutflows, the errors, etc.
- ❖ Information on how to (or not to) combine signal regions / analyses

Recasting/Reinterpretation

Long standing exercise at Les Houches
focused on LHAD proposal

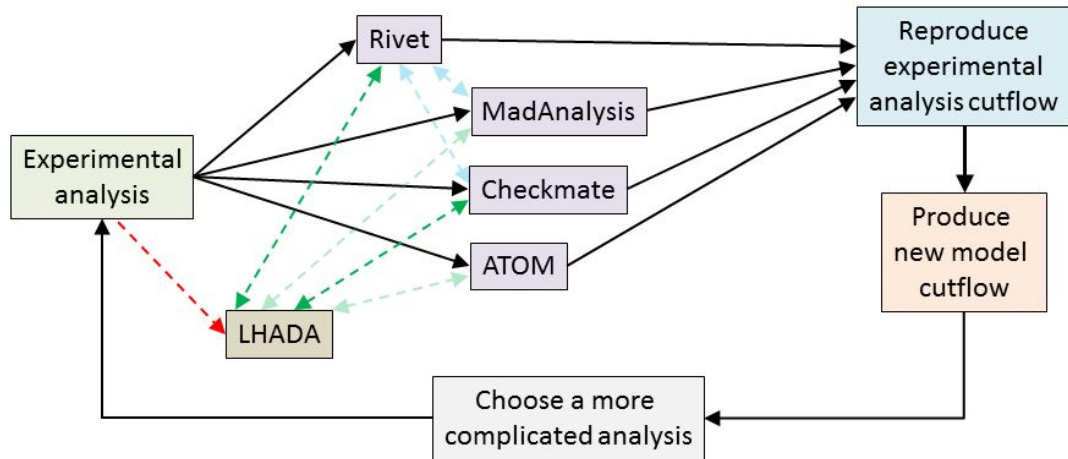

At LH17 biggest focus on benchmarking
different frameworks:

- Implement experimental analyses
with increasing difficulty
 - Jets+MET - ATLAS - 13 TeV
(arxiv:1605.03814)
 - Monophoton - ATLAS - 13
TeV (arxiv:1704.03848)
 - 3 leptons + MET - CMS - 13
TeV (CMS-SUS-16-039)
 - 1 lepton + MET + Jets ($\geq 1b$)
- CMS - 13 TeV
(arxiv:1706.04402)
- Cross-check cut-flow tables and
most representative plots
 - Using 2 different BSM signal
models

Analysis framework steps

Benchmark exercise workflow

Jets+MET - ATLAS - 13 TeV (arxiv:1605.03814)

Description	#evt	tot.eff	rel.eff	#evt	tot.eff	rel.eff	tot.eff	
2jm cut-flow:		Rivet			MadAnalysis5			CheckMATE
	31250	100%	-	32150	100%	-	100%

Contur: Constraints On New Theories Using Rivet

- John Butterworth, David Grellscheid: Quite a bit of development work this week, including adding several new data/analyses
- Studies of several new models underway within a few projects, aim for proceedings
 - Kristin Lohwasser, Ken Lane, Jose Zurita, Ursula Laa (Higgs fiducial cross sections group), Gregory Moreau, Sylvain Fichet, Tim Cohen, ...
- Clear that including ability to compare directly to SM calculations is a priority

Other activities

Simplified Models (Some discussion but not much concrete activities under the MC umbrella)

Activities encompassing the definition and extension of simplified models:

- [Simplified Models for Long Lived Particles](#)
 - [SMODELS](#)
 - [Paper by Tim Cohen et al.](#)
-
- Lecture on simplified likelihoods (Andy)
 - Lots of discussions...

Conclusions

- Go home and do QCD :-D
